Hille Yosida Theorem.hypotheses Evaluated

Hypothesis Evaluation Report

Stats

- Hypotheses evaluated: 44
- Support threshold: 0.62
- Refute threshold: 0.62
- Margin: 0.08
- Force resolution: False
- Coherence signals: 44
- Global coherence baseline: 0.608311

Verdict Counts

- inconclusive: 27
- supported: 17

Mathematical Readout

phyp.hille-yosida-theorem.021 [intervention-focus]

- Verdict: inconclusive (support=0.5261, refute=0.0000, confidence=0.4139)
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.0000
- Key reasons: high priority inherited from connector hypotheses

phyp.hille-yosida-theorem.022 [intervention-focus]

- Verdict: inconclusive (support=0.5387, refute=0.0017, confidence=0.4265)
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.0000

- Key reasons: high priority inherited from connector hypotheses; high downstream impact relative to intervention set

phyp.hille-yosida-theorem.023 [**intervention-focus**]

- Verdict: inconclusive (support=0.3567, refute=0.0007, confidence=0.2533)
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.0000
- Key reasons: high priority inherited from connector hypotheses

phyp.hille-yosida-theorem.024 [**intervention-focus**]

- Verdict: inconclusive (support=0.2995, refute=0.1561, confidence=0.1840)
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.0000
- Key reasons: low downstream/cross-component signals indicate low-yield target

phyp.hille-yosida-theorem.025 [**intervention-focus**]

- Verdict: inconclusive (support=0.4914, refute=0.0000, confidence=0.3790)
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.0000
- Key reasons: high downstream impact relative to intervention set

phyp.hille-yosida-theorem.026 [**intervention-focus**]

- Verdict: inconclusive (support=0.2876, refute=0.0065, confidence=0.1945)
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.0000

phyp.hille-yosida-theorem.001 [**bridge-link**]

- Verdict: supported (support=0.7307, refute=0.0000, confidence=0.6422)
- Antecedent schema: unconditional
- Target consequence: equivalence
- Preserved invariant: group-theoretic-structure mathematical structure
- Barrier scope: none
- Alignment signals: antecedent=0.0000, consequence=0.7548, invariant=0.1912, barrier=0.0000
- Key reasons: target already depends on support in KB; structural signature overlap between support and target; symbol-role alignment indicates semantic compatibility; theorem-family embedding similarity indicates structural proximity

phyp.hille-yosida-theorem.033 [**definition-introduction**]

- Verdict: supported (support=0.7084, refute=0.0000, confidence=0.6154)

- Antecedent schema: unconditional
- Target consequence: equivalence
- Preserved invariant: group-theoretic-structure mathematical structure
- Barrier scope: none
- Alignment signals: antecedent=0.0000, consequence=0.7548, invariant=0.1912, barrier=0.0000
- Key reasons: conceptual_kind=definition-introduction; connector support for conceptual bridge present; nontrivial structured semantic overlap between support and target contexts; conceptual move preserves explicit invariant: group-theoretic-structure mathematical structure

phyp.hille-yosida-theorem.002 [**bridge-link**]

- Verdict: supported (support=0.6624, refute=0.0000, confidence=0.5617)
- Antecedent schema: unconditional
- Target consequence: equivalence
- Preserved invariant: group-theoretic-structure mathematical structure
- Barrier scope: none
- Alignment signals: antecedent=0.0000, consequence=0.7548, invariant=0.1910, barrier=0.0000
- Key reasons: target already depends on support in KB; symbol-role alignment indicates semantic compatibility; target consequence schema grounded in target statement structure: equivalence; preserved invariant matches shared mathematical structure: group-theoretic-structure mathematical structure

phyp.hille-yosida-theorem.003 [**bridge-link**]

- Verdict: supported (support=0.6530, refute=0.0660, confidence=0.5316)
- Antecedent schema: unconditional
- Target consequence: equivalence
- Preserved invariant: group-theoretic-structure mathematical structure
- Barrier scope: barrier + powers-of-resolvent-verification
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.1903
- Key reasons: target already depends on support in KB; symbol-role alignment indicates semantic compatibility; barrier scope is structurally visible: barrier + powers-of-resolvent-verification

phyp.hille-yosida-theorem.034 [**definition-introduction**]

- Verdict: supported (support=0.6336, refute=0.0000, confidence=0.5291)
- Antecedent schema: unconditional
- Target consequence: equivalence
- Preserved invariant: group-theoretic-structure mathematical structure
- Barrier scope: none

- Alignment signals: antecedent=0.0000, consequence=0.7548, invariant=0.1910, barrier=0.0000
- Key reasons: conceptual_kind=definition-introduction; connector support for conceptual bridge present; nontrivial structured semantic overlap between support and target contexts; conceptual move preserves explicit invariant: group-theoretic-structure mathematical structure

phyp.hille-yosida-theorem.035 [definition-introduction]

- Verdict: supported (support=0.6218, refute=0.0624, confidence=0.4985)
- Antecedent schema: unconditional
- Target consequence: equivalence
- Preserved invariant: group-theoretic-structure mathematical structure
- Barrier scope: barrier + powers-of-resolvent-verification
- Alignment signals: antecedent=0.0000, consequence=0.0000, invariant=0.0000, barrier=0.1903
- Key reasons: conceptual_kind=definition-introduction; connector support for conceptual bridge present; nontrivial structured semantic overlap between support and target contexts; conceptual move is barrier-scoped: barrier + powers-of-resolvent-verification
